Engineering Technology Adjunct Faculty Search Committee

UCNJ Union College of Union County, NJ

Cranford, New Jersey

Re: Engineering Technology Lecture & Lab Adjunct Faculty (EVENING Courses, Electrical) — Spring 2027

Dear Members of the Search Committee:

I am applying for the Spring 2027 Engineering Technology Lecture and Lab Adjunct Faculty opening for evening courses, with a particular interest in electrical engineering technology instruction. I hold a PhD in Electrical and Computer Engineering from the University of Oklahoma and have experience teaching undergraduate Electrical Engineering Technology students, supporting communications laboratories, and working on real-world telecommunications systems. I would welcome the opportunity to bring that combination of teaching and practical engineering experience to UCNJ.

My most directly relevant experience is as a Lecturer in the Department of Technology at the University of Lahore, where I taught Computer Programming, Communication Systems, and Wireless Communication to undergraduate Electrical Engineering Technology students. The technology setting shaped how I taught: students needed to understand fundamental principles, but also how to use those principles in calculations, code, experiments, and troubleshooting. I prepared and supported instructional material, helped students work through technical problems, assessed their progress, and advised student projects. Beyond my university appointments, I have tutored students at other educational levels, which has strengthened my ability to explain concepts patiently and adjust examples to different levels of preparation.

At the University of Engineering and Technology, Taxila, I supported communications coursework and laboratory activities, including experiments, assignments, technical documentation, and grading. At COMSATS University Islamabad, I helped undergraduate and graduate students with research projects, simulations, and reports. I understand the importance of being present and prepared for scheduled classes and laboratories, giving timely feedback, maintaining accurate assessment records, and helping students who need additional support outside class.

I bring an applied industry perspective from AT&T Labs, Futurewei, and AT&T, where I have worked on wireless networks, network measurements, performance analysis, and machine-learning-based engineering tools. I use Python, C/C++, MATLAB, and simulation and data-analysis tools to examine practical problems. These are useful ways to connect introductory programming and communication-system concepts to measurable engineering outcomes. I would approach UCNJ's approved syllabi and laboratory requirements with the same attention to clear objectives, safe and reproducible exercises, and assessment of what students can actually demonstrate.

My strongest instructional matches are programming, communication systems, wireless systems, and relevant electrical engineering technology lectures and labs. I would be glad to contribute in those areas according to departmental needs and the courses assigned. I appreciate UCNJ's commitment to accessible, applied education and would value the opportunity to work with its students and Engineering Technology faculty.

Thank you for your consideration.

Sincerely,

Waseem Raza, PhD
