Adjunct Faculty Search Committee
B.S. Electrical and Computer Engineering Technology Program
College of Engineering and Computing Sciences
New York Institute of Technology
Old Westbury, New York

Re: Adjunct Faculty — Electrical & Computer Engineering Technology (Job ID 2026-4779)

Dear Members of the Search Committee:

I am applying for the Adjunct Faculty position in Electrical and Computer Engineering Technology at New York Institute of Technology's Old Westbury campus. I earned my PhD in Electrical and Computer Engineering from the University of Oklahoma in 2025, and I bring previous undergraduate engineering technology teaching, communications laboratory experience, student mentoring, and applied engineering experience with AT&T, AT&T Labs, and Futurewei. I would welcome the opportunity to contribute to New York Tech's practice-oriented approach to engineering education.

As a Lecturer in the Department of Technology at the University of Lahore, I taught Computer Programming, Communication Systems, and Wireless Communication to undergraduate Electrical Engineering Technology students. I developed course materials and assessments, guided student projects, and connected theory with practical engineering problems. At the University of Engineering and Technology, Taxila, I supported communications laboratory instruction and experimentation, while at COMSATS University Islamabad I mentored undergraduate and graduate students on technical research and project work.

After reviewing New York Tech's 2026–2027 Electrical and Computer Engineering Technology curriculum, I see particularly strong connections with ETEC 310 Communication Circuits, ETEC 422 Wireless Communication Technology, CTEC 204 Programming Techniques I, CTEC 249 Computational Analysis, and CTEC 405 Applied Machine Learning and AI. I am also interested in contributing to ETEC 110/120 Electrical Technology I and II where my preparation aligns with the assigned course and laboratory objectives. I would coordinate with program faculty on prescribed experiments, equipment, safety procedures, and learning outcomes rather than assume that prior communications teaching covers every electrical technology laboratory specialty.

My industry and doctoral work gives me practical material for assignments on signal measurements, system behavior, Python/MATLAB simulations, engineering troubleshooting, and evidence-based design decisions. I value clear explanations, structured laboratory exercises, timely feedback, and an inclusive classroom where students can test predictions, investigate discrepancies, and build confidence in technical problem solving.

I am available for on-campus evening teaching with class start times at or after 5:00 p.m., subject to the program's scheduling needs. Thank you for your consideration. I would welcome a discussion of where my teaching, communications, and applied engineering background could support the ECET program.

Sincerely,

Waseem Raza, PhD
