Re: Adjunct of Data Science — Graduate Data Science Courses

Dear Members of the Search Committee:

I am applying for the Adjunct of Data Science position at Saint Peter's University. I earned a PhD in Electrical and Computer Engineering from the University of Oklahoma in 2025, with research focused on artificial intelligence and machine learning, and I have prior university teaching and student-research mentoring experience. My current AI/ML engineering work at AT&T and previous data engineering work with Impac Exploration Services have given me practical experience developing data pipelines, predictive models, and analytics workflows. I would welcome the opportunity to bring this combination of scholarship, teaching, and professional practice into Saint Peter's graduate Data Science program.

My strongest teaching interests align with DS-542 Python in Data Science, DS-630 Machine Learning, DS-600 Data Mining, DS-530 Data Management Systems, and DS-610 Big Data Analytics. I could also contribute to DS-620 Data Visualization and DS-670 Capstone: Big Data & Data Science, particularly through project-based assignments and industry-oriented supervision. My technical work includes Python, SQL, pandas, scikit-learn, deep learning, Azure Databricks, Spark/PySpark, data integration, and model evaluation. I also have hands-on familiarity with IBM Watson tools and strong Excel experience for analysis and reporting. For data visualization, I regularly use Python-based tools and can adapt course exercises to the program's specified software.

At Impac, I developed Azure-based ingestion, transformation, and data-quality workflows for analytical datasets, reducing preparation time by 40 percent. At AT&T, I work on AI-supported network diagnostics, classification, and operational decision-making, including improving automated root-cause classification accuracy from 20 percent to 80 percent. These experiences help me connect graduate coursework with real questions of dataset quality, reproducibility, model selection, interpretation, and deployment constraints.

Previously, I served as a Lecturer at the University of Lahore, where I taught Computer Programming, Communication Systems, and Wireless Communication. I also supported instructional laboratories at UET Taxila and mentored undergraduate and graduate research projects at COMSATS. In my teaching, I emphasize clear learning outcomes, practical exercises, regular constructive feedback, and applied projects in which students explain and defend their technical choices. This approach is consistent with Saint Peter's commitment to professional preparation, student growth, and service.

I am particularly interested in weekday evening teaching assignments beginning at or after 5:00 p.m., including in-person or hybrid formats. Thank you for considering my application. I would welcome the opportunity to support Saint Peter's graduate students in developing practical and responsible data science expertise.

Sincerely,

Waseem Raza, PhD
