Adjunct Faculty Search Committee
Department of Electrical and Computer Engineering
Henry M. Rowan College of Engineering
Rowan University
Glassboro, New Jersey

Re: Adjunct Faculty, Electrical and Computer Engineering — Job No. 501674

Dear Members of the Search Committee:

I am applying for the Adjunct Faculty position in Electrical and Computer Engineering at Rowan University. I earned my PhD in Electrical and Computer Engineering from the University of Oklahoma in 2025, specializing in AI/ML for reliable wireless networks. I bring university teaching, engineering laboratory and research mentoring, and experience at AT&T, AT&T Labs, Futurewei, and Impac Exploration Services. Rowan's hands-on, project-based curriculum strongly matches my approach to connecting mathematical foundations with implementation and experimental evaluation.

My strongest teaching interests are communication and wireless systems, signals and systems, digital signal processing, digital image processing, and machine learning/artificial intelligence. I would be particularly interested in ECE 09433 Electrical Communication Systems, ECE 09432 Wireless Communications, ECE 09341 Signals and Systems, ECE 09351 Digital Signal Processing, ECE 09452 Introduction to Digital Image Processing, ECE 09455 Machine Learning, and ECE 09454 Introduction to Modern Neural Networks. The enclosed teaching statement explains my preparation and course preferences in greater detail.

At the University of Lahore, I served as Lecturer in the Department of Technology and taught Computer Programming, Communication Systems, and Wireless Communication to undergraduates. I developed exercises and assessments, guided student projects, and emphasized conceptual understanding through practical examples. At UET Taxila, I supported communications laboratories; at COMSATS University Islamabad and the University of Oklahoma, I mentored undergraduate and graduate researchers in simulation, analysis, experimental design, and technical communication.

My doctoral research investigated wireless-network simulation, propagation modeling, data-efficient learning, and resilient communication systems. Related research in wearable sensing and signal analysis provides additional examples for DSP, image-processing and machine-learning applications. Currently, as a Machine Learning Engineer at AT&T, I develop data-driven telecommunications diagnostic methods, including a root-cause classification workflow that improved automated performance from approximately 20% to 80%. Prior industry work has also strengthened my experience with Python, practical software workflows, and rigorous validation. I would use nonproprietary examples and reproducible coding exercises to help students understand both engineering principles and implementation tradeoffs.

For Rowan's laboratory- and clinic-oriented courses, I would develop activities such as communication-channel simulations, digital-filter experiments, image-processing comparisons, and neural-network baselines for engineering signals. I am also open to introductory digital systems, control systems, and RF/microwave-related courses following appropriate refresher study, a review of course expectations, and preparation for any specialized laboratory equipment. I distinguish that willingness to prepare from areas in which I have already taught or practiced extensively.

I would welcome the opportunity to contribute to Rowan's ECE and Electrical Engineering Technology programs and to mentor students through meaningful projects. Thank you for considering my application. I would be pleased to discuss how my academic and industry background could support your department.

Sincerely,

Waseem Raza, PhD
