Academic Profile

Electrical and Computer Engineering researcher and educator with a PhD from the University of Oklahoma specializing in AI/ML for wireless networks. Research addresses reliable learning, propagation modeling, network optimization, self-healing, digital twins, generative augmentation, and reinforcement learning for 5G/6G systems. University teaching and research are complemented by industrial R&D at AT&T Labs, Futurewei, and AT&T, bridging rigorous experiments with real-world network challenges.

Research Interests

Wireless AI and 5G/6G; Robust and Data-Efficient ML; Digital Twins and Propagation Modeling; Network Optimization and Self-Healing; Transfer and Generative Learning; Autonomous Networks and Wearable AI

Doctoral Research Focus

Doctoral research in AI/ML for wireless networks, emphasizing resilient propagation models, data-efficient generative learning, adaptive network optimization, self-healing, and reproducible evaluation.

Education

PhD, Electrical and Computer Engineering *09/2019 - 07/2025*

University of Oklahoma, Norman, Oklahoma, USA

MSc, Telecommunication Engineering *08/2014 - 08/2016*

University of Engineering and Technology, Taxila, Pakistan

BSc, Telecommunication Engineering *11/2010 - 06/2014*

University of Engineering and Technology, Taxila, Pakistan

Teaching, Research & Professional Experience

Teaching & Instruction

Lecturer, Department of Technology **12/2017 - 09/2019**

University of Lahore, Pakistan *Lahore, Pakistan*

- Taught programming, communication systems, and wireless communication with practical examples.
- Advised senior-design students on projects, academic plans, and early careers.
- Aligned course materials with learning outcomes and accreditation standards.
- Supported accreditation, exams, technical workshops, and student activities.

Teaching areas: Wireless Communication Systems; LTE/5G Networks; Signals and Digital Signal Processing; Machine Learning and AI; Programming and Data Science; Experimental Design and Labs

University Research Appointments

Graduate Research Assistant **09/2019 - 07/2025**

AI4Networks, University of Oklahoma *Tulsa, OK*

- Built 3GPP-compliant Python simulation tools and an AI-enabled 5G research testbed.
- Built GAN, transfer-learning, autoencoder, and reinforcement-learning models for wireless data.
- Led 100+ experiments testing wireless ML under domain shift and limited labeled data.
- Developed self-healing and outage-management methods, improving resilience by 30%.
- Published wireless AI research and mentored junior researchers in experimental design.

Research Associate, ComSens Lab **06/2016 - 12/2017**

COMSATS University Islamabad, Pakistan *Islamabad, Pakistan*

- Modeled wireless communication systems through simulation, analysis, and technical reports.
- Mentored Bachelor's and Master's theses in experiment design and research presentation.
- Reviewed student reports and manuscripts for rigor and publication readiness.
- Supported proposals, literature reviews, lab seminars, and research coordination.

Full-Time Research Scholar, Communication Systems Lab **08/2014 - 02/2016**

University of Engineering and Technology, Taxila, Pakistan *Taxila, Pakistan*

- Researched wireless communication systems while completing an MSc in Telecommunications.
- Supported communications courses, labs, assignments, grading, and examinations.
- Led wireless communication labs and prepared technical manuals and experiments.
- Developed course and student-project materials for practical wireless engineering.

Industry Research & Engineering

Machine Learning Engineer **02/2025 - Present**
AT&T, contractor via Innovatix Inc. *Bedminster, NJ*

- Applied domain-adaptive ML to telecom service assurance and model validation.
- Designed cross-domain evaluation and error-analysis methods for operational ML.
- Worked with engineering and public-safety teams on reliable network assurance.

Advanced-Degrees Intern **06/2024 - 08/2024**
AT&T Labs *Austin, TX*

- Analyzed 500K+ LTE/5G-NR logs with ML, reducing diagnostic time by 20%.
- Improved 5G NR-NTN cell selection by 15% through data-driven validation.
- Presented operational data insights to next-generation wireless engineering teams.

Advanced Wireless Technology Development Intern **09/2022 - 01/2023**
Futurewei Technologies *Schaumburg, IL*

- Improved wireless CSI compression by 25% with transfer learning and autoencoders.
- Ran 50+ experiments on wireless ML robustness under changing data conditions.
- Translated research results into recommendations for future wireless networks.

Advanced-Degrees Intern **06/2022 - 08/2022**
AT&T Labs *Bedminster, NJ*

- Improved 5G standalone user-timing precision by 20% with ML and statistics.
- Analyzed user traces with SQL and presented results to engineering leadership.
- Turned operational traces into indicators for network diagnosis and optimization.

Research Projects & Platforms

SyntheticNET: 3GPP-Compliant Network Simulation *Research Project | 2020-2024*

Developed a Python-based, 3GPP-aligned simulation environment for realistic mobility, propagation, and cellular-network experimentation when measured data is sparse or costly. Supported controlled data generation and repeatable studies in propagation modeling, network optimization, digital twins, and resilient wireless AI.

Tools & Methods: Python, 3GPP, Wireless Simulation, Mobility Modeling, Propagation Modeling, Synthetic Data, Experiment Design, Digital Twins, Network Analytics

TurboRAN Experimental Platform *Research Infrastructure | 2020-2024*

Built and used a multi-band, multi-tier experimental platform for evaluating AI-enabled radio-access-network methods under controlled network conditions. Supported repeatable measurement collection, testbed experimentation, RAN optimization studies, and validation of emerging wireless-network algorithms.

Tools & Methods: 5G Testbeds, RAN, Network Measurement, Experiment Design, Wireless Prototyping, Multi-Band Systems, Performance Evaluation, RAN Optimization

Propagation Models & Digital Twins *Research Project | 2024*

Developed robust data-driven radio-propagation models for wireless digital twins using domain-informed generative learning and scarce measured data. Combined 3GPP-informed pretraining, GAN-based augmentation, domain adaptation, and statistical validation to improve resilience under distribution shift.

Tools & Methods: Propagation Modeling, Digital Twins, GANs, Domain Adaptation, 3GPP Models, Synthetic Data, Statistical Validation, Wireless AI, Distribution Shift

Wearable Intelligence for Health Monitoring *Research Project | 2024-2026*

Developed deep-learning workflows for recognizing medication-taking and dietary activities from smartwatch accelerometer and gyroscope signals in free-living settings. Evaluated windowing, feature extraction, CNN/LSTM-style sequence models, cross-user generalization, and recall-oriented performance for health-monitoring applications.

Tools & Methods: Wearable AI, Smartwatch IMU, Time Series, Deep Learning, CNN/LSTM, Feature Engineering, Cross-User Evaluation, Activity Recognition, Healthcare AI

Research Methods & Technical Expertise

Machine Learning: Deep learning, transfer learning, domain adaptation, adversarial learning, generative modeling, reinforcement learning, classification, time-series analysis, robustness evaluation, and model validation

Wireless & Networked Systems: LTE/4G, 5G-NR, NTN, mobility, RAN, propagation modeling, outage management, self-healing, network measurements, and service assurance

Research Methods: Experimental design, 3GPP-aligned simulation, statistical analysis, cross-validation, reproducible workflows, distribution-shift evaluation, technical writing, and publication development

Engineering Tools: Python, PyTorch, TensorFlow, scikit-learn, XGBoost, Pandas, NumPy, SQL, cloud analytics, data pipelines, visualization, Git, and Linux

Teaching & Mentoring: Wireless communications, communication systems, programming, machine learning, laboratory instruction, experimental methods, student projects, and research development

Academic Service & Recognition

William H. Barkow Scholarship *2024*
University of Oklahoma, Electrical and Computer Engineering

Clyde L. Farrar Endowment Scholarship *2024*
University of Oklahoma

P.H. Robinson Fellowship *2023*
University of Oklahoma

FAS-Charles Forgan Scholarship *2023*
University of Oklahoma

Nettie Vincent Boggs Graduate Endowment *2022*
University of Oklahoma

Self-Learning

1. Machine Learning Stanford Online / Coursera | Completed | Mar 29, 2020

Supervised and unsupervised learning, regularization, model evaluation, and practical predictive modeling.

2. Introduction to Deep Learning & Neural Networks with Keras

IBM / Coursera | Completed | Aug 12, 2026

Neural networks, training workflows, optimization, loss functions, and model evaluation with Keras.

3. AI Foundations & Industry Overview for Telecommunication

Coursera | Completed | Jun 19, 2026

AI applications in telecom networks, operations analytics, service assurance, and automation.

4. Network and Security Optimization in Telecommunication

Coursera | Completed | Jun 20, 2026

Data-driven network optimization, telecom security, reliability analysis, and operational efficiency.

5. 4G Network Fundamentals Institut Mines-Télécom / Coursera | Completed | Aug 2, 2026

LTE radio and core networks, cellular architecture, mobility management, and 4G fundamentals.

6. 5G Network Fundamentals Institut Mines-Télécom / Coursera | In progress (21%)

5G NR radio, network architecture, service capabilities, and next-generation cellular fundamentals.
