List of Courses Taught

Waseem Raza, PhD | Rutgers University-New Brunswick | Electrical and Computer Engineering Lecturer Pool

University Courses Previously Taught

University of Lahore, Pakistan | Lecturer | December 2017 to September 2019

- Computer Programming. Delivered university-level instruction in programming fundamentals, problem-solving, and engineering applications.
- Communication Systems. Taught concepts and analytical methods for communication systems, including technical problem-solving and engineering applications.
- Wireless Communication. Taught principles of wireless communication and their application to modern communication systems.

Additional Instructional Experience

University of Engineering and Technology, Taxila, Pakistan | Communication Systems Laboratory | August 2014 to February 2016

- Supported communications laboratory instruction, experiments, assignment preparation, examinations, and grading.
- Assisted students with practical experiments and technical documentation.

COMSATS University Islamabad, Pakistan | Research Associate, ComSens Lab | June 2016 to December 2017

- Mentored Bachelor's and Master's students on communications-related research, thesis projects, experiments, and technical presentations.

Related Courses of Teaching Interest (Not Previously Taught as Instructor of Record)

My PhD in Electrical and Computer Engineering, research in AI/ML for wireless networks, and industry work in telecommunications provide a technical foundation for related instructional assignments, subject to course needs and preparation:

- Machine Learning for Engineers and Introductory AI/ML: supervised learning, classification, regression, model evaluation, and engineering datasets.
- Data Science and Programming for Engineers: Python-based data processing, visualization, statistical learning, and reproducible experiments.
- Computer and Communication Networks: networking principles, network performance, and wireless/cellular systems.

At Rutgers, 14:332:423 Computer and Communication Networks and 14:332:443 Machine Learning for Engineers are examples of relevant curricular areas. These Rutgers courses and the AI/ML areas above are prospective teaching interests, not claims of previous classroom instruction.

Course codes, semesters, credit hours, and enrollments for the previously taught courses are omitted because these details have not been independently confirmed.
