Re: Assistant Professor, Electrical and Computer Engineering | Posting FP00103, Position F00009

Dear Members of the Search Committee:

I am applying for the full-time Assistant Professor position in Electrical and Computer Engineering at Kettering University. I earned a PhD in Electrical and Computer Engineering from the University of Oklahoma in 2025 and bring previous undergraduate teaching, engineering laboratory support, peer-reviewed research, and industrial experience at AT&T, AT&T Labs, and Futurewei. Kettering's integration of rigorous coursework, hands-on laboratories, and cooperative education closely matches my approach to preparing engineering students for professional practice.

As a Lecturer at the University of Lahore, I taught Computer Programming, Communication Systems, and Wireless Communication to undergraduate engineering technology students. I developed instructional materials and assessments, advised student projects, and helped connect mathematical concepts with practical engineering problems. At UET Taxila, I supported communications laboratories, experiments, and student assessments; at COMSATS University Islamabad, I mentored undergraduate and graduate research projects. These experiences shaped a teaching philosophy built around conceptual clarity, carefully designed laboratory activities, reproducible computational exercises, and constructive feedback.

Kettering's curriculum offers particularly strong opportunities to contribute to EE-430 Communication Systems, EE-340 Electromagnetic Wave Propagation, EE-336/338 Signals and Systems, and the signal-processing aspects of EE-434 Digital Signal Processing, as well as computational engineering and student design projects. My expertise in Python, MATLAB, wireless measurements, signal and data analysis, and simulation can support meaningful hands-on learning. For additional foundational electrical-engineering and laboratory assignments, I would align my preparation with course objectives, equipment, safety requirements, and established departmental practices.

My research investigates reliable, data-efficient AI for wireless and networked systems, including domain-informed generative models, transfer learning, outage management, and learning-based optimization. I have published in Computer Communications, Sensors, IEEE Network, and IEEE conferences. My industry work extends this scholarship to operational diagnostics and large-scale network data, providing authentic problems for student research and applied engineering projects. At Kettering, I would develop a focused teacher-scholar program linking intelligent sensing, communications, and resilient connected systems, with undergraduate participation and industry-informed collaboration.

I would welcome the opportunity to contribute to Kettering's undergraduate and graduate education, applied scholarship, and academic community. Thank you for considering my application.

Sincerely,

Waseem Raza, PhD
