Stevens Institute of Technology
Hoboken, New Jersey

Re: ECE Adjunct Instructor, RQ29408 — Wireless Communications (EE 583)

Dear Members of the Search Committee:

I am applying for the part-time Electrical and Computer Engineering Adjunct Instructor position (RQ29408) at Stevens Institute of Technology, with particular interest in teaching EE 583 Wireless Communications. I earned a PhD in Electrical and Computer Engineering from the University of Oklahoma in 2025, and my academic and industrial work has centered on wireless communications, 5G networks, signal and system modeling, and machine learning for intelligent networks. I would welcome the opportunity to bring this experience to Stevens' graduate engineering students.

I previously served as a Lecturer at the University of Lahore, where I taught Wireless Communication, Communication Systems, and Computer Programming. I prepared lectures and assessments, introduced practical problem-solving exercises, and supported student projects. I also contributed to communications laboratories at UET Taxila and mentored student research projects at COMSATS University Islamabad. These experiences inform a teaching approach that combines mathematical foundations, guided computation, real engineering examples, and timely feedback.

My doctoral research investigated robust AI/ML for wireless propagation prediction, network self-healing, domain adaptation, and data-driven optimization. My industry experience includes AT&T, AT&T Labs, and Futurewei, where I analyzed telecommunications measurements and developed solutions involving 5G networks, signal processing, and operational diagnostics. I can draw on these experiences in EE 583 to connect wireless propagation, channel modeling, modulation, performance assessment, and network design with practical simulation exercises in Python or MATLAB.

The posting also lists CPE 810 GPU & Multicore Programming. My programming background includes Python, C/C++, numerical computation, and deep-learning workloads, although my established teaching and research specialization is in wireless communications rather than dedicated GPU/CUDA instruction. I would be happy to discuss the CPE 810 syllabus and the specific expertise expected for that assignment.

I am interested in in-person evening teaching, with classes beginning at or after 5:00 p.m. Given that the current advertisement refers to Spring and Fall 2026, I would also appreciate clarification on whether the department is considering instructors for an upcoming term. Thank you for your consideration. I would welcome the opportunity to contribute to the graduate ECE program at Stevens.

Sincerely,

Waseem Raza, PhD
